SUMMARY

AI Engineer with over four years of software engineering experience building end-to-end web applications with Vue.js, Nuxt.js, React and Python. Currently builds a production multi-agent platform, designing agent runtimes, workflow automation, tool integrations and safety controls with LangGraph, LLMs and RAG. Previously the primary full-stack engineer for a creator platform serving 600K+ monthly visits.

TECHNICAL SKILLS

AI & LLMs	Generative AI, LLMs, Prompt Engineering, Tool Calling, OpenAI & Anthropic APIs, MCP
AI Agents	Multi-Agent Systems, LangGraph, LangChain, Human-in-the-Loop, Agent Guardrails
RAG & Evals	Retrieval-Augmented Generation, Vector Search (pgvector), LLM Evals, Langfuse Tracing
Frontend	JavaScript (ES6+), TypeScript, Vue.js, Nuxt.js, React, Next.js, Pinia, Redux, PixiJS, HTML5, CSS3
Backend & Data	Python, Django, DRF, Node.js, REST APIs, WebSockets, Celery, Redis, OAuth 2.0, PostgreSQL, MySQL, MongoDB
Cloud & Mobile	AWS (ECS, S3), Docker, Git, Netlify, Jira, React Native, Ionic/Capacitor
Engineering	Debugging (Sentry), Performance Optimization, System Design, UI/UX Design, Code Review

PROFESSIONAL EXPERIENCE

AI Engineer / Software Engineer III | LEXPOOL

Feb 2026 - Present

Building a multi-agent platform that lets AI agents automate business workflows safely.

- Built the multi-agent system in LangGraph with tool calling, sub-agents and long-term memory.
- Made agent runs reliable with crash recovery, safe retries and background jobs on Celery and Redis.
- Built a visual workflow builder with triggers, conditions, delays and AI steps.
- Added an AI assistant that creates complete workflows from plain-English descriptions.
- Connected agents to Google Workspace, Slack and MCP services through secure OAuth integrations.
- Added safety controls: tool permissions, human approvals, spend limits and audit logs.
- Set up Langfuse tracing and automated evaluations to catch quality issues before release.
- Developed the React frontend with live agent run updates over WebSockets.

Senior Software Engineer | STAXSOL

Jul 2025 - Feb 2026

Led full-stack development of a creator community platform with **600K+** monthly visits across web, iOS and Android, where creators publish content, chat with fans and run community events.

- Delivered community events with virtual currency, voting and leaderboards for **100+** users.
- Built an AI web app that generates ready-to-publish social media posts, used for **10+** clients.
- **Turned unclear rules into working logic:** designed permission and age-restriction rules for co-owned content that behave the same for members and guests.
- **Debugged production issues across 3 platforms:** traced Sentry errors and data-sync bugs on web, Android and iOS to root cause.
- Owned features end to end, reviewed code and coordinated frontend and backend releases.

Tech: Vue.js, Nuxt.js, React, Ionic/Capacitor, Python, Django REST Framework, PostgreSQL, Sentry

Software Engineer | STAXSOL *Jun 2022 - Jun 2025*

Built and scaled the creator platform's web and mobile experience, from UI/UX design to REST API integration and real-time features.

- **Fixed slow page loads and weak SEO:** migrated the frontend from Vue.js to Nuxt.js (SSR).
- **Cut initial page load:** code-split and lazy-loaded **13** profile sections, **15+** modals and the text editor.
- Designed UI/UX for most platform screens and built them in Vue.js and React on REST APIs.
- Built WebSocket chat and notifications, role-based auth, media upload, search and privacy settings.
- Delivered a React Native mobile app covering authentication, user matching and profile management.

Tech: Vue.js, Nuxt.js, React, React Native, WebSockets, REST APIs

Software Engineer Intern | STAXSOL *Mar 2022 - May 2022*

- Built the company website with Nuxt.js and reusable Vue components.

PROJECTS

AI Social Media Content Engine | Generative AI (StaxSol)

An AI pipeline that turns a client's website and niche into ready-to-publish, on-brand social posts, used to produce content for multiple clients across healthcare, food, construction and real estate.

- Built an end-to-end pipeline: website scraping, search-grounded niche research, LLM post writing and AI image rendering with the real brand logo added.
- Designed per-client prompts and structured JSON outputs for captions, headlines, hashtags and visual scenes.
- Built an automated compliance check that blocks risky claims (such as medical and weight-loss guarantees), adds required disclaimers and re-generates failed posts.

Tech: Python, Gemini (Vertex AI), Nano Banana / Veo, Prompt Engineering, Structured Outputs, Pillow

AI Resume Analyzer

A web app that reviews resumes and gives clear, structured feedback.

- Built a React frontend and a Node.js backend that reads and parses resumes.
- Wrote prompts that return strengths, gaps and suggested improvements.

Tech: React, Node.js, LLM APIs, Prompt Engineering

HomeBakely | Final-Year Project

A marketplace where customers order baked goods from home bakers.

- Built the Vue 3 frontend with menus, cart and separate customer and baker views.
- Built the Python backend and REST APIs for accounts, menus and orders.

Tech: Vue 3, Python, REST APIs

EDUCATION

BS Computer Science | Kinnaird College for Women University, Lahore *2018 - 2022*
